

SHARPSGUARD[®] eco containers

REDEFINING SUSTAINABILITY

A Mauser Packaging Solutions brand

We protect what matters.

Safe for users, sustainable for our planet

Introducing a major development in our mission to reduce single use plastics; the new SHARPSGUARD® eco containers, made using at least 40% recycled plastic.

Following the successful launch of SHARPSGUARD® eco pharmi and WIVA™ Infinity, made from responsibly sourced recycled plastic, SHARPSGUARD® eco containers are the next sustainable product offering from Stericycle®. It is the largest roll out so far in terms of product range size and includes SHARPSGUARD® for sharps, SHARPSGUARD® anatomical and SHARPSGUARD® dani container.

As you would expect from the leading supplier of sharps and clinical waste containers in the UK and Ireland, this latest evolution in our SHARPSGUARD® range still meets the highest standards in quality and safety, while providing a sustainable solution to the healthcare sector and minimising the impact on the environment.

This innovative application of post-consumer recycled resin (PCR) within container production is a key part of a long-term strategy to reduce the reliance on single use plastics and to support the NHS in reaching net zero by 2040.

The same range you know and trust:

- Safe and easy to use
- Fully compliant with UN 3291 and ISO 23907-1:2019 standards
- Predominantly yellow base and a full range of coloured lids, in line with HTM 07-01 waste segregation guidance
- Compatible with current accessories, trolleys and brackets

Your SHARPSGUARD® containers are evolving

NEW SHARPSGUARD® eco containers:

- Made from a minimum of 40% recycled material
- Reducing the impact on the environment
- Reducing carbon footprint
- Reducing dependence on virgin plastic made from crude oils
- Removing the financial impact of the government's Plastic Packaging Tax
- Recycled material sourced from a local supplier, boosting the regional economy and reducing transport related Co2 emissions

One of the UK's leading accredited polymer recycling organisations has helped to develop the ultimate blend of PCR needed for sharps containers. Using plastic waste collected from UK kerbsides, the plastics are sorted, flaked, cleaned, and turned into PCR granules ready to be used in the manufacture of SHARPSGUARD® sharps containers.

To achieve this perfect mix, you will notice a difference in colour.
